Production of Christmas decorations

A Christmas market is held every year in our kindergarten. Every year, children and teachers make some Christmas products or decorations and then, they are sold for a symbolic price. This year, we decided to make ornaments from a material called "Cold porcelain".

Recipe + what you need:

- A mug of water
- A mug of baking soda
- A cup of potato starch
- Dough mat, roller, Christmas cutters, decorations according to your imagination

Approach:

Mix everything together, put it in the pan and stir until the ingredients are combined, approx. 7 min. When the mass thickens, put it in a towel and knead in the towel until the mass cools down. Once the mass has cooled down, we can process it with our hands and it can be worked with immediately. If you want to work with it the next day, wrap it in foil and store it in the refrigerator. Roll out the mass approx. 3 mm and cut out various decorations. The material dries in this way for at least 72 hours. You can leave the decorations as they are or decorate them further.

We will be happy if you try such decorations with us and show off with a photo how beautiful decorations you managed.
